DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 43, 44, drawn to pathfinding or routing:
switching a message which includes an address header,
classified in class 370, subclass 389.
- II. Claims 50, 53, 54, 95, drawn to loopback diagnostic
testing, classified in class 370, subclass 249.

The inventions are distinct, each from the other because of the following reasons: Inventions of routing and switching a message having an address header, such as a packet, and loopback diagnostic testing are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention of routing and switching a packet with a predetermined format does not require the particulars of a control processor

performing loopback testing for patentability. The subcombination has separate utility such as diagnostic testing of a switching system.
